**Frequency of allegations (biweekly):** Reports containing allegations of physical abuse after being less frequent over the last several biweekly periods.

**% of Screen-ins that contain allegation (biweekly): subset of top categories**

**Comparisons** ■ 2019 Overall ■ 6 Month Prior To COVID

**Biweekly Period**

**Why this matters:** COVID-19 may lead to increased incidence of certain types of abuse and neglect. Tracking these data will allow us to adjust our practices and respond to these trends.

Note: CY 2019 composite and 6 mo prior to COVID composite calculated for biweekly basis from data from September 1, 2019 to February 29, 2020. Top allegation types displayed above, accounting for 67% of all allegations. Share is calculated by counting the number of screen-ins that an allegation type appears in and dividing by total number of screen-ins for the period. Allegations were only counted once per screen-in so as to not measure duplicate allegations within the same referral (e.g., allegations of inadequate basic care against two parents in one referral only count as one allegation in the chart above). Includes allegations collected at intake and during assessment. Source: NH SACWIS - Bridges data extracted 10/13/2020.
